Sex:	U	Rabies Tag:	-
Color:	Tan/Black	Patient ID:	HSYDE1X
DOB:	02/11/2026		

Discharge Instructions

Wellness, first puppy vaccines

All of the puppies look great! No major problems with any of them (no heart murmurs, no umbilical hernias, both of Blackest testicles are descended). They all received their first puppy vaccine on their right shoulder. It is normal for them to be sleepy and sore for 24 hours , but if you notice any vomiting, diarrhea, or severe lethargy that puppy should be rechecked immediately. Severe reactions are very rare, but they do happen.

1. next vaccine is DA2PP 2/3 and Lepto 1/2 in 4 weeks (final vaccines at 16 and 20 weeks- the last one is just a final lyme vaccine)
2. continue to deworm them every 2 weeks for 3 doses
3. bring a fecal sample to the next visit
4. Give the Nexgard on the same day once a month
5. Keep the puppies away from other dogs until 16 weeks when they are fully vaccinated. They can still get parvo or distemper because the puppy immune system still has maternal antibodies that compete with the vaccine until then.

You did a fantastic job with them! I am very impressed!

Prescriptions

Nexgard Plus 8.1 - 17lbs green for dogs

Rx #:	22633992
Quantity Prescribed:	8
Rx Valid Thru:	04/08/2027
Refills:	1
Directions:	Give once monthly year round.
Prescribing Doctor:	Dr. Kalleem
